

Test Name: Daily Aptitude Assessment 14

Test Code: KGIS0098

Description:

Welcome to the test. This test consists of 2 sections: Aptitude and Verbal. Please read the instructions for each section carefully before starting.

Section Summary

Section	No. of Questions	Marks (+ / -)
Verbal	15	+1 / -0
Aptitude	15	+1 / -0

Verbal Section

Duration: 20 minutes

Questions: 15

Marks per Question: +1 for correct, -0 for incorrect

1

Choose the correct meaning of the bold word.

The leader was **charismatic**.

A. Boring

B. Attractive and inspiring

C. Shy

D. Dull

Correct Answer:

B. Attractive and inspiring

Explanation:

Charismatic means having strong charm.

Marks: +1 for correct answer, -0 for wrong answer

What does it mean when someone “cries wolf”?

- A. Asking for help when it's not really needed
- B. Guarding something important
- C. Acting fearlessly
- D. Feeling lonely

Correct Answer:

A. Asking for help when it's not really needed

Explanation:

“Cry wolf” means to keep asking for help or raising false alarms, even when there's no real danger. Eventually, people stop believing you.

Marks: +1 for correct answer, -0 for wrong answer

Choose the word that means the opposite of the given word.

JUBILANT

- A. rejoicing
- B. melancholy**
- C. triumphant
- D. cheerful

Correct Answer:

B. melancholy

Explanation:

Jubilant means feeling or expressing great happiness and triumph. While, melancholy means a feeling of pensive sadness, typically with no obvious cause. Hence, option is apt.

Marks: +1 for correct answer, -0 for wrong answer

Sentences of a paragraph are given below. While the first and the last sentences (S1 and S6) are in the correct order, the sentences in between are jumbled up. Arrange the sentences in the correct order to form a meaningful and coherent paragraph.

(S1) Elephants are found in India and in Africa.

A. In fact, the two are considered to be different species.

B. An African elephant is larger, with longer tusks and bigger ears.

C. In both countries they live in herds in jungles.

D. The elephants are shy animals and generally keep away from men.

(S6) The elephant is a very intelligent animal.

A. BACD

B. BADC

C. BDCA

D. BDAC

Correct Answer:

A. BACD

Explanation:

BACD is indeed the correct order of the sentences to form a meaningful and coherent paragraph.

- The sequence begins with **sentence B**, which describes the physical differences between African and Indian elephants, noting that African elephants are larger with longer tusks and bigger ears.
- **Sentence A** follows, emphasizing that these differences are significant enough that the two are considered different species.
- **Sentence C** then mentions that elephants in both countries live in herds in jungles.
- **Sentence D** concludes by describing their behavior as shy animals that generally avoid human contact.

This order effectively transitions from the physical differences between African and Indian elephants, to their classification as different species, and finally to their habitat and behavior, leading smoothly into the concluding sentence about the elephant's intelligence.

Marks: +1 for correct answer, -0 for wrong answer

Read the following passage carefully and choose the most appropriate answer to the question out of the four alternatives.

The idea of evolution (which is a gradual change) was not a new one. The Greeks had thought of it, so had Erasmus Drawin, the grandfather of Charles Darwin, and also the Frenchman, Lamack. It is one thing to have an idea; we can all guess and sometimes make a lucky guess. It is quite another thing to produce a proof of the correctness of that idea. Darwin thought he had that proof in his notebooks. He saw that all animals had to struggle to survive. Those which were best at surviving, their environment passed on the good qualities which helped them to their descendants. This was called 'the survival of the fittest'. For example, in a cold climate, those who have the warmest fur will live. Darwin believed that this necessity for an animal to deal with its environment explained the immense variety of creatures.

In colder climates

- A. All animals can survive
- B. No animals can survive
- C. Only animals with fur can survive
- D. Animals are hard to come by

Correct Answer:

C. Only animals with fur can survive

Explanation:

Refer to, "in a cold climate, those who have the warmest fur will live."

Marks: +1 for correct answer, -0 for wrong answer

6

The responsibility of completing the project lies with _____ who volunteered first.

- A. whoever
- B. whomever
- C. whosoever
- D. whichever

Correct Answer:

A. whoever

Explanation:

"Whoever" acts as the subject of the clause "who volunteered first." "Whomever" is used as an object, "whosoever" is archaic, and "whichever" refers to things, not people.

Marks: +1 for correct answer, -0 for wrong answer

Find the part of the sentence that violates the rules of reported speech:

"The recruiter told [A] the candidate that [B] the results [C] will be announced [D] the following week."

A. The recruiter told

B. the candidate that

C. the results

D. will be announced

Correct Answer:

D. will be announced

Explanation:

In reported speech, when the reporting verb is in the past tense ("told"), "will" typically changes to "would." Therefore, "will be announced" should be "would be announced."

Marks: +1 for correct answer, -0 for wrong answer

The two countries have been _____ conflict over the disputed territory for several decades.

A. under

B. in

C. at

D. into

Correct Answer:

B. in

Explanation:

"In conflict" is the standard idiomatic prepositional phrase used to describe a state of disagreement or friction between parties. While similar phrases use "at" (such as at war), "conflict" strictly pairs with "in" in this context. "Under," "at," and "into" are grammatically incorrect.

Marks: +1 for correct answer, -0 for wrong answer

Healthy food gives ____ energy for daily work and study.

A. a

B. an

C. the

D. no article

Correct Answer:

D. no article

Explanation:

“Energy” is used generally as an uncountable noun.

Marks: +1 for correct answer, -0 for wrong answer

Choose the correct verb form to complete the sentence.

By the time you read this, I _____ the country.

A. leave

B. will leave

C. will have left

D. am leaving

Correct Answer:

C. will have left

Explanation:

The future perfect tense shows an action completed before a future moment.

Marks: +1 for correct answer, -0 for wrong answer

There ____ several issues to address.

A. is

B. was

C. are

D. has

Correct Answer:

C. are

Explanation:

In *there is/there are* constructions, the verb agrees with the real subject ("issues").

Marks: +1 for correct answer, -0 for wrong answer

Choose the correct option:

Neither of the boys ____ present.

A. are

B. were

C. is

D. have

Correct Answer:

C. is

Marks: +1 for correct answer, -0 for wrong answer

Choose the correct alternative which will improve the part of the sentence given in quotes.

Everyone in the fraternity has his own 'set in' prejudices.

A. Set by

B. Set of

C. Set on

D. No improvement

Correct Answer:

B. Set of

Explanation:

The correct substitution of the quoted words is "set of".

"Set in" is incorrect as it implies a fixed position rather than possession or composition. "Set of prejudices" correctly uses "of" to express possession of multiple elements or characteristics grouped together.

Marks: +1 for correct answer, -0 for wrong answer

Choose among the following that best expresses the meaning of the given word.

ZAP

A. Bear

B. Create

C. Begin

D. Destroy

Correct Answer:

D. Destroy

Explanation:

Zap: destroy or obliterate.

Hence the correct synonym is 'Destroy'.

Marks: +1 for correct answer, -0 for wrong answer

Choose the correctly spelled word meaning "irritated or annoyed."

A. Exasperated

B. Exhilarated

C. Extemporaneous

D. None

Correct Answer:

A. Exasperated

Explanation:

Exasperated means intensely annoyed.

Marks: +1 for correct answer, -0 for wrong answer

Aptitude Section

Duration: 20 minutes

Questions: 15

Marks per Question: +1 for correct, -0 for incorrect

1

Mohit invested ₹1,20,000 at 16% compound interest compounded half-yearly. After 1.5 years, he withdrew ₹60,000 and reinvested it at 12% simple interest for 6 months. Find his total amount after 2 years from the initial investment.

A. ₹1,61,320

B. ₹1,62,058

C. ₹1,69,078

D. ₹1,68,800

Correct Answer:

B. ₹1,62,058

Explanation:

$$P = 120000$$

$$\text{Rate of interest for Half-yearly} = \frac{16}{2} = 8\%$$

$$\begin{aligned} \text{Time } T &= 1.5 \text{ years} = 3 \\ \text{Total amount after 1.5 years} &= P \left(1 + \frac{R}{100}\right)^T = \\ 120000 \left(1 + \frac{8}{100}\right)^3 &= 120000 \times \frac{108}{100} \times \frac{108}{100} \times \frac{108}{100} = 151165.44 \end{aligned}$$

$$\text{Total amount for CI} = 151165.44 - 60000 = 91165.44$$

He withdrew ₹60,000 and reinvested it at 12% simple interest for 6 months

$$SI = \frac{PRT}{100} = \frac{60000 \times 12 \times 0.5}{100} = 3600$$

$$\text{Total amount of SI} = 60000 + 3600 = 63600$$

$$\begin{aligned} \text{Total amount of CI} &= P \left(1 + \frac{R}{100}\right)^T = 91165.44 \left(1 + \frac{8}{100}\right)^1 = 91165.44 \times \frac{108}{100} = \\ 98458.675 \end{aligned}$$

$$\begin{aligned} \text{His total amount after 2 years from the initial investment} &= 98458.675 + 63600 = = \\ 1,62,058.675 &\approx 1,62,058 \end{aligned}$$

Marks: +1 for correct answer, -0 for wrong answer

The compound interest on a sum for 2 years at 10% per annum compounded annually is ₹2,100. What would be the simple interest on the same sum at the same rate for the same period?

A. ₹1,950

B. ₹2,000

C. ₹2,050

D. ₹1,900

Correct Answer:

B. ₹2,000

Explanation:

$$CI = P \left(1 + \frac{R}{100}\right)^T - P = P \left(\left(1 + \frac{R}{100}\right)^T - 1 \right)$$

$$2100 = P \left(\left(1 + \frac{10}{100}\right)^2 - 1 \right)$$

$$2100 = 0.21P$$

$$P = \frac{2100}{0.21} = 10000$$

$$SI = \frac{PRT}{100} = \frac{10000 \times 10 \times 2}{100} = 2000$$

Marks: +1 for correct answer, -0 for wrong answer

Seema took a loan of ₹2,50,000 at 12% compound interest, compounded annually. She paid back ₹80,000 at the end of the first year and another ₹1,00,000 at the end of the second year. By the end of the second year, what percentage of her original loan was still left to be repaid?

A. 65.6%

B. 31.8%

C. 49.6%

D. 38.08%

Correct Answer:

C. 49.6%

Preplinsta
An Adda Education Company

Explanation:

After 1st year

$$\text{Total amount} = P \left(1 + \frac{R}{100}\right)^T = 250000 \left(1 + \frac{12}{100}\right)^1 = 250000 \times \frac{112}{100} = 280000$$

She paid back ₹80,000 at the end of the first year.

$$\text{Total amount} = 280000 - 80000 = 200000$$

P = 200000 for second year

After 2nd year

$$\text{Total amount} = P \left(1 + \frac{R}{100}\right)^T = 200000 \left(1 + \frac{12}{100}\right)^1 = 200000 \times \frac{112}{100} = 224000$$

She paid back ₹1,00,000 at the end of the second year.

$$\text{Total amount yet to pay} = 224000 - 100000 = 124000$$

$$\text{Percentage of her original loan that was still left to be repaid} = \frac{124000}{250000} \times 100 = 49.6\%$$

Marks: +1 for correct answer, -0 for wrong answer

Rakesh invested ₹75,000 partly at 8% simple interest and partly at 12% compound interest compounded annually. After 2 years, the total interest from both investments was ₹15,540. If the CI portion gave ₹9,540 as interest, how much was invested at simple interest?

A. ₹45,000

B. ₹40,000

C. ₹37,500

D. ₹50,000

Correct Answer:

C. ₹37,500

Preplinsta
An Adda Education Company

Explanation:

$$SI = 15540 - 9540 = 6000$$

$$SI = \frac{PRT}{100}$$

$$6000 = \frac{P \times 8 \times 2}{100}$$

$$P = 6000 \times \frac{100}{16} = 37500$$

$$CI = P \left(1 + \frac{R}{100}\right)^T - P = P \left(\left(1 + \frac{R}{100}\right)^T - 1 \right) = (75000 - 37500) \left(\left(1 + \frac{12}{100}\right)^2 - 1 \right)$$

$$CI = 37500 \times \frac{2544}{10000} = 9540$$

Marks: +1 for correct answer, -0 for wrong answer

Deepak lent ₹P at 15% simple interest for 3 years and ₹2P at 10% compound interest, compounded annually, for 2 years. If the total interest earned from both investments amounts to ₹11,745, find the value of P.

A. ₹10,500

B. ₹12,000

C. ₹13,500

D. ₹11,000

Correct Answer:

C. ₹13,500

Preplnsta
An Adda Education Company

Explanation:

$$SI + CI = 11745$$

$$SI = \frac{PRT}{100} = \frac{P \times 15 \times 3}{100} = 0.45P$$

In compound interest $P = 2P$

$$CI = 2P \left(1 + \frac{R}{100}\right)^T - 2P = 2P \left(\left(1 + \frac{R}{100}\right)^T - 1\right)$$

$$CI = 2P \left(\left(1 + \frac{10}{100}\right)^2 - 1\right)$$

$$CI = 2P \times 0.21 = 0.42P$$

$$0.45P + 0.42P = 11900$$

$$P = \frac{11745}{0.87} = 13500$$

Marks: +1 for correct answer, -0 for wrong answer

Sanjay took a loan at 18% per annum compound interest. After 1 year, the rate decreased to 15% per annum. If he repays ₹37,996 at the end of the second year to clear the loan, what was the original loan amount?

A. ₹26,000

B. ₹27,000

C. ₹28,000

D. ₹25,000

Correct Answer:

C. ₹28,000

Explanation:

$$\text{Total amount} = P \times \left(1 + \frac{R}{100}\right)^T \times \left(1 + \frac{R}{100}\right)^T$$

$$37996 = P \times \frac{118}{100} \times \frac{115}{100}$$

$$P = 37996 \times \frac{100}{118} \times \frac{100}{115} = 28000$$

Marks: +1 for correct answer, -0 for wrong answer

A sum of ₹61,500 is divided into two parts. One part is lent at 10% simple interest and the other at 15% compound interest compounded annually. If after 2 years the total interest from both parts is equal, how much was lent at simple interest?

A. ₹36,000

B. ₹38,400

C. ₹31,500

D. ₹32,000

Correct Answer:

C. ₹31,500

Preplnsta
An Adda Education Company

Explanation:

After 2 years SI = CI

Let's assume that sum lent for SI is $S \rightarrow P = S$

Sum lent for CI become $61500 - S \rightarrow P = 61500 - S$

$$\frac{PRT}{100} = P \left(\left(1 + \frac{R}{100} \right)^T - 1 \right)$$

$$\frac{S \times 10 \times 2}{100} = (61500 - S) \left(\left(1 + \frac{10}{100} \right)^2 - 1 \right)$$

$$0.2S = (61500 - S) \times 0.21$$

$$0.2S = 12915 - 0.21S$$

$$0.41S = 12915$$

$$S = \frac{12915}{0.41} = 31500$$

Marks: +1 for correct answer, -0 for wrong answer

A sum of money becomes Rs. 12,960 after 2 years and Rs. 18,662.4 after 4 years on compound interest compounded annually. Find the original principal amount and the rate of interest per annum.

A. Rs. 8600, 15%

B. Rs. 8900, 16%

C. Rs. 8920, 18%

D. Rs. 9000, 20%

Correct Answer:

D. Rs. 9000, 20%

Explanation:

Let P be principal and r be rate.

$$P(1 + r)^2 = 12960$$

$$P(1 + r)^4 = 18662.4$$

$$\text{Dividing: } (1 + r)^2 = \frac{18662.4}{12960} = 1.44$$

$$1 + r = \sqrt{1.44} = 1.2$$

$$r = 20\%$$

$$P = \frac{12960}{1.44} = 9000$$

Marks: +1 for correct answer, -0 for wrong answer

The simple interest on a certain sum for 4 years at 12% per annum is Rs. 2,100 less than the simple interest on the same sum for 6 years at 15% per annum. Find the sum.

A. Rs. 4000

B. Rs. 4800

C. Rs. 5000

D. Rs. 5600

Correct Answer:

C. Rs. 5000

Explanation:

$$\text{SI for 4 years at 12\%} = P \times 0.12 \times 4 = 0.48P$$

$$\text{SI for 6 years at 15\%} = P \times 0.15 \times 6 = 0.9P$$

$$\text{Difference} = 0.9P - 0.48P = 0.42P = 2100$$

$$P = \frac{2100}{0.42} = 5000$$

Marks: +1 for correct answer, -0 for wrong answer

At what rate of compound interest per annum will Rs. 8,000 amount to Rs. 12,167 in 3 years when interest is compounded annually?

A. 12%

B. 12.5%

C. 15%

D. 14%

Correct Answer:

C. 15%

Explanation:

$$8000 \times (1 + r)^3 = 12167$$

$$(1 + r)^3 = \frac{12167}{8000}$$

$$1 + r = \frac{23}{20}$$

$$1 + r = 1.15$$

$$r = 15\%$$

Marks: +1 for correct answer, -0 for wrong answer

A certain sum of money amounts to Rs. 6,272 in 2 years and Rs. 7,024.64 in 3 years at compound interest compounded annually. Find the principal and rate of interest.

A. Rs. 5000, 12%

B. Rs. 4900, 14%

C. Rs. 5000, 14%

D. Rs. 4800, 12%

Correct Answer:

A. Rs. 5000, 12%

Explanation:

$$P(1 + r)^2 = 6272$$

$$P(1 + r)^3 = 7024.64$$

$$\text{Dividing: } 1 + r = 1.12$$

$$r = 12\%$$

$$6272 = P(1 + r)^2$$

$$6272 = P(1 + 0.12)^2$$

$$6272 = P(1.12)^2$$

$$P = \frac{6272}{1.2544} = 5000$$

Marks: +1 for correct answer, -0 for wrong answer

The difference between simple interest and compound interest on a certain sum at 10% per annum for 2 years is Rs. 100. Find the principal amount.

A. Rs. 8000

B. Rs. 9000

C. Rs. 10000

D. Rs. 12000

Correct Answer:

C. Rs. 10000

Explanation:

$$CI - SI = P \times \left(\frac{r}{100}\right)^2$$

$$\text{For 2 years at 10\%: } CI - SI = P \times \left(\frac{10}{100}\right)^2 = 0.01P$$

$$0.01P = 100$$

$$P = 10000$$

Marks: +1 for correct answer, -0 for wrong answer

A sum of money is lent at 8% per annum compound interest. If the interest for the second year exceeds that of the first year by Rs. 96, find the original sum.

A. Rs. 10000

B. Rs. 12000

C. Rs. 15000

D. Rs. 18000

Correct Answer:

C. Rs. 15000

Explanation:

$$\text{Interest for year 1} = P \times \frac{8}{100} = 0.08P$$

$$\text{Interest for year 2} = (P + 0.08P) \times \left(\frac{8}{100}\right) = 0.08P + 0.0064P = 0.0864P$$

$$\text{Difference} = 0.0864P - 0.08P = 96$$

$$0.0064P = 96$$

$$P = 15000$$

Marks: +1 for correct answer, -0 for wrong answer

Neha invested ₹90,000 for 3 years. She received compound interest at 10% for the first year, 12% for the second year, and 15% for the third year, all compounded annually on the accumulated amount. What is the total Compound Interest at the end?

A. ₹37,512

B. ₹35,618

C. ₹38,916

D. ₹32,512

Correct Answer:

A. ₹37,512

Preplnsta
An Adda Education Company

Explanation:

After 1st year

$$\text{Total amount} = P \left(1 + \frac{R}{100}\right)^T = 90000 \left(1 + \frac{10}{100}\right)^1 = 90000 \times \frac{110}{100} = 99000$$

After 2nd year

$$\text{Total amount} = P \left(1 + \frac{R}{100}\right)^T = 99000 \left(1 + \frac{12}{100}\right)^1 = 99000 \times \frac{112}{100} = 110880$$

After 3rd year

$$\text{Total amount} = P \left(1 + \frac{R}{100}\right)^T = 110880 \left(1 + \frac{15}{100}\right)^1 = 110880 \times \frac{115}{100} = 127512$$

$$\text{Total Compound Interest at the end} = \text{Total amount} - \text{Original amount} = 127512 - 90000 = 37512$$

Or

The amount of 90,000 is compounded for 3 years at 10% for the first year, 12% for the second year, and 15% for the third year.

$$\text{Compounded amount} = 90000 \times \frac{110}{100} \times \frac{112}{100} \times \frac{115}{100} = 127512$$

$$\text{Total Compound Interest at the end} = \text{Compounded amount} - \text{Original amount} = 127512 - 90000 = 37512$$

Marks: +1 for correct answer, -0 for wrong answer

Anita borrowed a sum at 24% compound interest compounded annually. She paid back ₹18,600 at the end of the first year and ₹23,436 at the end of the second year to completely clear the debt. What was the original sum borrowed?

A. ₹30,000

B. ₹32,000

C. ₹33,000

D. ₹35,000

Correct Answer:

A. ₹30,000

Preplnsta
An Adda Education Company

Explanation:

Let's assume that the original sum is S.

After 1st year

$$\text{Total amount} = P \left(1 + \frac{R}{100}\right)^T - 18600 = P \left(1 + \frac{24}{100}\right)^1 - 18600 = 1.24P - 18600$$

$$\text{New principal amount} = 1.24P - 18600$$

After 2nd year

$$\text{Total amount} = (1.24P - 18600) \left(1 + \frac{R}{100}\right)^T$$

$$\text{Total amount} = (1.24P - 18600) \left(1 + \frac{R}{100}\right)^T = (1.24P - 18600) \left(1 + \frac{24}{100}\right)^1 = (1.24P - 18600) \times 1.24$$

$$23064 = (1.24P - 18600) \times 1.24$$

$$\frac{23064}{1.24} = 1.24P - 18600$$

$$18600 + 18600 = 1.24P$$

$$P = \frac{18600 + 18600}{1.24} = 30000$$

Marks: +1 for correct answer, -0 for wrong answer
